

Engineer – operation and maintenance

Company	Intertoll Norway AS / Intertoll Europe Group
Field	Operations , Inspections and maintenance
Job title	Engineer
Type of position	Permanent, full-time
Place	Bergen, Vestland
Application deadline	

Intertoll Norway AS is one of the main long term contractors for the prestigious PPP project the RV55 Sotrasambandet – a major road project for the Bergen region. The turnkey contractor Sotra Link will build tunnels, bridges, viaducts, underpasses, pavements and cycle paths and four-lane roads. Intertoll Norway will operate and maintain the road system for a minimum of 15 years after completion, in cooperation with the Norwegian Public Roads Administration. Our preparatory operations started in 2022, and full operations will start when the project opens. We are located in premises at Sotra in the heart of the road project.

Read more about the project Sotrasambandet via the link [Rv. 555 Sotrasambandet | The Norwegian Public Roads Administration](#) or on the website of the turnkey contractor www.sotralink.no.

We are seeking a skilled engineer, who want to use your experience and further develop your expertise in collaboration with skilled professionals across many disciplines.

As an engineer in Intertoll Norway, you will ,during the Sotrasambandet construction period be working together with Intertoll's international project development team, and after the operational phase starts in 2027, you will as a part of our local Norwegian team, be responsible for ensuring that inspections, maintenance and reporting are carried out efficiently, professionally and on time.

The position will be located initially at our project office close to Sotrasambandet and later at Intertoll's operations and maintenance centre along the Rv 555 road system.

Main tasks in the pre-operational/mobilization (2024-2027) phase and operational phase (from 2027- :

Overall coordination of Intertoll tasks, including :

- Assist with our mobilization tasks and the establishment of the operation and maintenance unit
- Cooperate with the contractor and the Client when necessary
- Support Intertoll's international team in design issues during the construction phase

- Assist in the preparation of guidelines, procedures and manuals for specific expert areas (e.g. bridge, tunnel, road surface, etc.)
- Participate in the development of local supplier networks and negotiation with subcontractors
- Assist the manager for operations and maintenance
- Performing, managing, organizing and reporting the obligatory tests and road/ tunnel inspections
- participate in planning of weekly, monthly and annual maintenance plans
- Coordinate and supervise subcontractors
- cooperate with electrical and mechanical equipment teams
- Interact with the client and the client's subcontractors
- cooperating with the concession, construction and parent companies
- cooperating with the road authority representatives, inc. NPRA, VTS, Tunnel Safety Officer, etc.

Preferred qualifications

- Higher relevant education as an engineer or civil engineer. Relevant experience can compensate for the educational requirement.
- Good competence in and experience with civil engineering, electrical and mechanical engineering or other relevant disciplines
- Preferable 3 years experience from operation and maintenance of transport infrastructure, preferably within tunnels or bridge structures or roads
- good knowledge of MS Office software
- Good Norwegian and English knowledge
- Valid driver's license
- Experience with on-site supervision of subcontractors

We offer

- Good terms including pension and insurance
- Great opportunities for further development and competence enhancement
- Opportunity to work on a challenging and impactful project
- A welcoming and inclusive work environment
